

What is claimed is:

1 1. An adjustable and transportable mattress support arrangement for adjustably supporting a
2 mattress in the cab of a truck, comprising:

3 a pivotally connected elongated mattress support member for supporting said
4 mattress;

5 a plurality of expandable gaseous fluid cushion means each of said plurality being
6 expandable and contractable in a vertical direction and removably positioned between a truck
7 cab floor and said mattress support member;

8 means for applying a gaseous fluid under pressure to said expandable cushion means
9 whereby the vertical position of said mattress support member can be adjusted and whereby
10 said mattress support member is supported by said expandable cushion means.

1 2. A support arrangement as defined in claim 1, wherein said mattress support member has a
2 pivotally connected front section and a rear section and wherein said sections may be folded
3 for storage convenience.

1 3. A support arrangement as defined in claim 1, wherein said mattress support member has a
2 pivotally connected front half and a rear half;

3 wherein said halves may be unfolded to form a rectangularly shaped elongated
4 mattress support member;

5 wherein at least one of said expandable gaseous fluid cushion means is positioned
6 between said cab floor and each corner of said rectangularly shaped elongated mattress
7 support member; and

8 wherein said means for applying a gaseous fluid under pressure is capable of
9 selectively introducing and adjusting fluid to each of said cushion means positioned
10 between said cab floor of said rectangularly shaped elongated mattress support member and
11 whereby the vertical position and orientation of said mattress support member can be
12 adjusted via said selective introduction and fluid adjustment.

1 4. A support arrangement as defined in claim 1 wherein said means for applying a gaseous
2 fluid under pressure comprises:

3 a valving means connected to each of said expandable gaseous fluid cushion means
4 and a pressurized air source used in association with a truck braking system.

1 5. A support arrangement as defined in claim 1 wherein said expandable gaseous fluid cushion
2 means is an expandable air cushion.

1 6. The support arrangement of claim 1 wherein said pivotal attachment is facilitated via one or
2 more hinging structures positioned between a first and second connecting portions
3 comprising said elongated mattress support member.

1 7. The support arrangement of claim 1 wherein said elongated mattress support member may
2 be folded and attached in a non-permanent manner to the rearmost vertical wall of said truck
3 cab.

1 8. The support arrangement of claim 1 wherein said elongated mattress support member is
2 substantially rectangular in form and has generally positioned at each corner thereof a
3 containment means to retain in position said expandable gaseous fluid cushion means.
